

Umair Khan

AI Engineer

Senior developer with 4 years of experience building enterprise-grade platforms across healthcare, logistics, and compliance sectors. Specialized in designing and deploying conversational AI systems, RAG pipelines, and agentic workflows. Proven track record of owning full backend lifecycles, leading development teams, and delivering scalable, production-ready solutions.

WORK EXPERIENCE

Senior Python Developer

Atria Technologies

10 / 2025 - Present

- Worked on AI development across three enterprise platforms, owning end-to-end design of RAG pipelines, Tool Calling via MCP, and conversational AI integrations
- Engineered an AI-based multi-language course conversion pipeline leveraging TTS, STT, and Translation to automate training content adaptation for global workforces
- Applied guardrails and cost optimization strategies across AI systems for safe, reliable, and scalable deployments

Mid-level Backend Developer

Atria Technologies

04 / 2024 - 09 / 2025

- Owned end-to-end backend development of a large-scale, HIPAA-compliant telehealth platform, taking full responsibility for API design, data modeling, and third-party integrations
- Implemented a scalable and secure cloud infrastructure using AWS services (EC2, RDS, S3, SES, IAM) and Docker
- Mentored junior developers, performed code reviews, and planned sprint workflows to improve team delivery consistency

Software Engineer

Megatech Trackers

04 / 2023 - 03 / 2024

- Migrated a legacy fleet management platform from ASP.NET to a modern stack using ReactJS, .NET Core, and MS SQL Server
- Revamped the in-house ERP with a full-stack rebuild using NextJS, .NET Core, and MS SQL Server

Full Stack Developer

Indigisys Private Limited

04 / 2022 - 03 / 2023

- Developed Python-based socket applications for real-time GPS data ingestion from devices like Teltonika, CONCOX, and MDVR, supporting concurrent multi-device connections
- Built a full-stack vehicle tracking application using PyQt6, FastAPI, and MySQL with a live map interface and REST API

EDUCATION

MS in Artificial Intelligence

FAST - NUCES

2024 - Present

SKILLS

PROJECTS

Safety & Compliance Training

AI Engineer

- Built a Conversational AI Assistant with Knowledge Base RAG system for accurate HAZWOPER and OSHA compliance responses, Tool Calling via MCP for dynamic backend and database interaction, guardrails for safe on-topic responses, and cost optimization to reduce token usage at scale.

Fire Detection & Evacuation System

AI Engineer

- Fine-tuned YOLO11m and Qwen3-VL-8B on the DetectiumFire dataset for real-time fire detection, with the VLM generating structured alerts covering severity and evacuation actions.

Telehealth Platform

Backend & AI Engineer

- Developed and maintained core backend modules for a large-scale, HIPAA-compliant telehealth application. Integrated Agora for real-time video/chat, multiple payment gateways, Claim.MD for medical claims processing, and built an AI Health Assistant to enable intelligent, context-aware patient-doctor interactions.

Construction Project Management

AI Engineer

- Designed and implemented a Reactive AI Assistant into the BuildNest platform, enabling stakeholders to instantly query project status, track timelines, and manage workflows, making construction project management faster and more intuitive.
